

Vincular URA ao sistema de atendimento

—

Passo a passo de como vincular o PABX a uma URA do tipo telefonia no sistema Omnichannel.

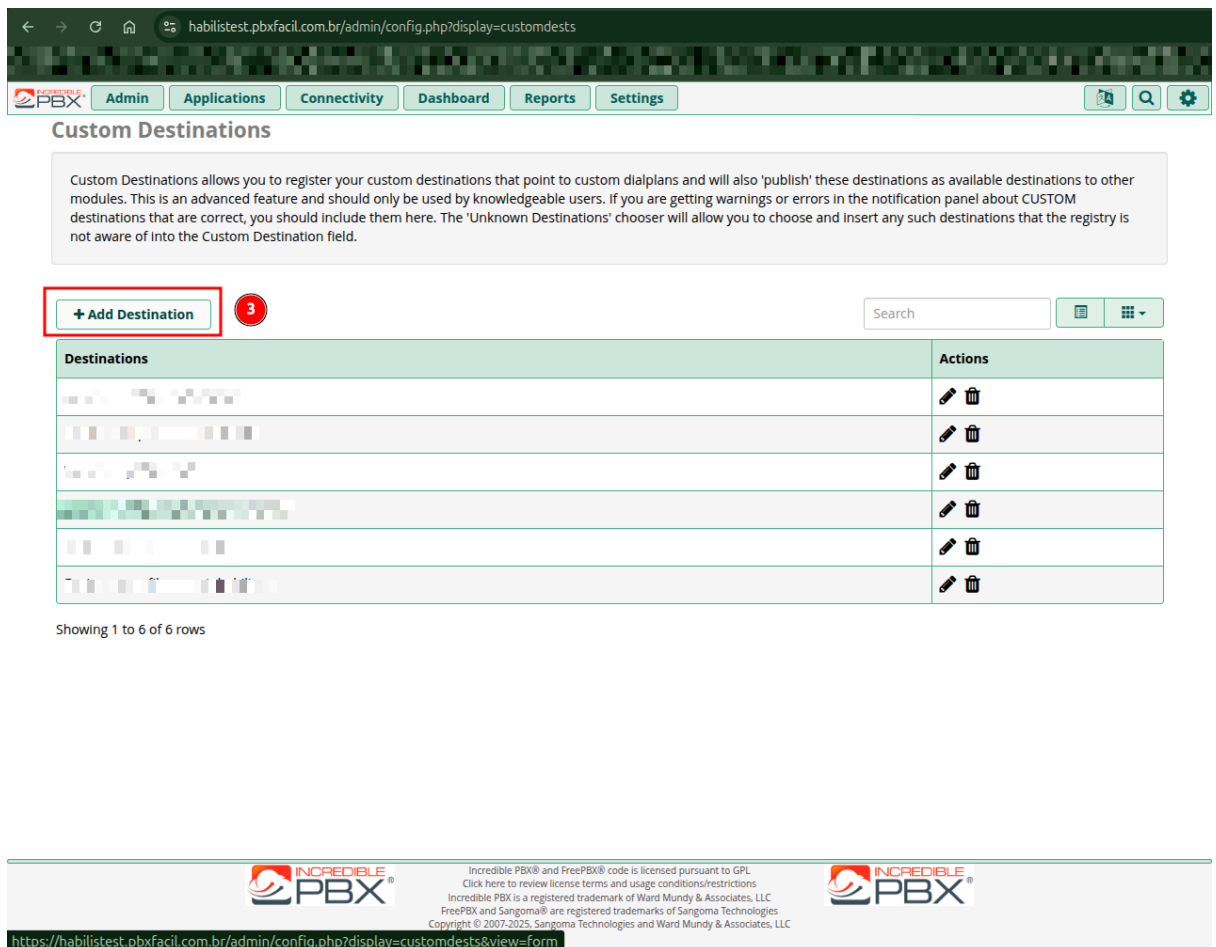

1) Acesso o PABX e vá para a aba `Admin; Custom destination`;

The screenshot shows the Incredible PBX web interface. The 'Admin' tab is selected, and the 'Custom Destinations' menu item is highlighted with a red circle and arrow labeled '1'. The 'Custom Destinations' menu item is also highlighted with a red circle and arrow labeled '2'. The interface includes a top navigation bar with tabs: Admin, Applications, Connectivity, Dashboard, Reports, and Settings. The main content area displays a table with columns for 'Custom Destinations' and 'Actions'. The table contains several rows of data, each with a unique identifier and a set of actions (edit and delete icons). The footer of the page contains the Incredible PBX logo, copyright information, and a URL: <https://habilitest.pbxfacil.com.br/admin/config.php?display=customdests>.

Custom Destinations	Actions

[imagem1]

2) Agora clique no botão `Add destination`;

Custom Destinations

Custom Destinations allows you to register your custom destinations that point to custom dialplans and will also 'publish' these destinations as available destinations to other modules. This is an advanced feature and should only be used by knowledgeable users. If you are getting warnings or errors in the notification panel about CUSTOM destinations that are correct, you should include them here. The 'Unknown Destinations' chooser will allow you to choose and insert any such destinations that the registry is not aware of into the Custom Destination field.

[imagem2]

3) Preencha os campos da seguinte forma:

—
[custom-destination]
target: ari-bridge,apptest,1 (O nome 'apptest' pode ser alterado)
destination_quick_pick: (pick destination)
description: Exemplo de descrição
notes: Exemplo de notas, informações adicionais
return: no
—

Depois de configurado, clique em 'Submit' e depois em 'Apply'.

- 4) No sistema de atendimento vá em 'Configurações', 'Filas' e clique no botão '+ Adicionar'. Em nome da fila, coloque o MESMO NOME que foi criado lá no _custom-destination_ no PABX. No exemplo, foi dado o nome de `apptest`. O tipo da fila será 'Telefonia (URA)'.

[imagem4]

[imagem5]

- 5) Em 'Configurações' da fila na opção 'Enviar para a URA' pode ser criado uma nova URA do tipo 'URA Avançada (telefonica)' ou atribuída uma já existente do mesmo tipo.
